QUALITY CONTROL TECHNICIAN

What does a Quality Control Technician do?

Quality control technicians examine nonagricultural raw materials, processed, machined, fabricated, or assembled parts or products and materials for defects, wear, and deviations from manufacturer or industry specifications. They monitor quality standards for nearly all manufactured products, including foods, textiles, clothing, glassware, motor vehicles, electronic components, computers, and structural steel. Specific duties vary across the wide range of industries in which these inspectors work. Working conditions vary by industry and establishment size. In manufacturing, it is common for most inspectors to remain at one workstation. Inspectors in some industries may be on their feet all day and have to lift heavy objects, whereas in other industries, they sit during most of their shift and read electronic printouts with massive quantities of data.
